

Universal Design for Learning

Benefits for All When Designing for All

Lloyd Rieber
lrieber@uga.edu
The University of Georgia

Lloyd P. Rieber

- Professor
 - My 18th year at UGA
 - Six years at TAMU
- Degrees
 - B.S. University of Pittsburgh
 - M.A. University of New Mexico
 - Ph.D. Penn State
- Teaching
 - Interactive Multimedia (Studio)
 - K-12 Technology Integration
 - Instructional Design
 - Research Methods
 - Universal Design
- Areas of Research
 - Visualization
 - Experiential Learning (Play Theory)
 - Microworlds, Simulations, & Games
 - Game design as learning
 - Use of assistive technology with special populations

Goals

- Overview and brief history of Universal Design for Learning
- Examples and implications of principles
- Persuade you to use UDL as a new lens for understanding your own work
- Motivate you to want to learn more
- iSkills Project: New \$1.2 million federal project

Universal Design for Learning

Another way to conceptualize good design, but one that begins with the needs of people usually viewed at the margins of society.

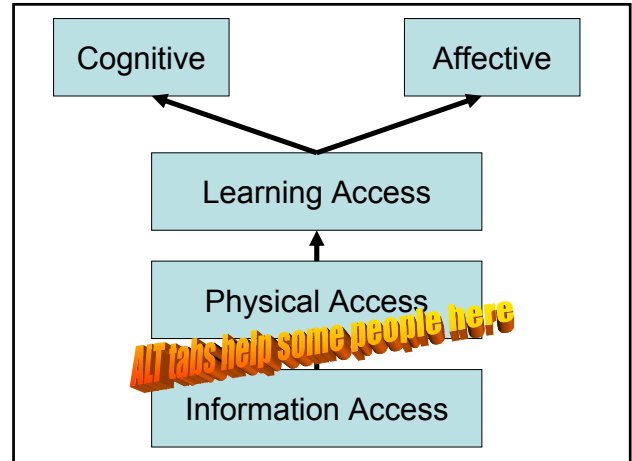

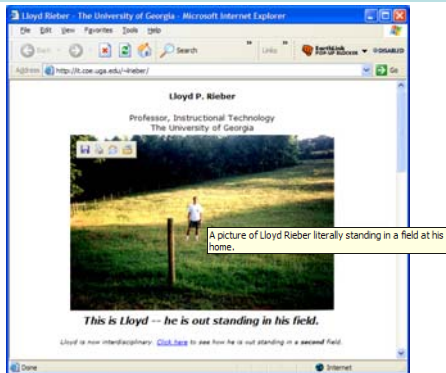

Universal Design for Learning and Instruction: More than ALT Tags

Lloyd Rieber & Michele Estes
Department of Educational Psychology & Instructional Technology
Office of Instructional Support & Development

But, adding ALT tags is a good start

Reasons to Practice Universal Design

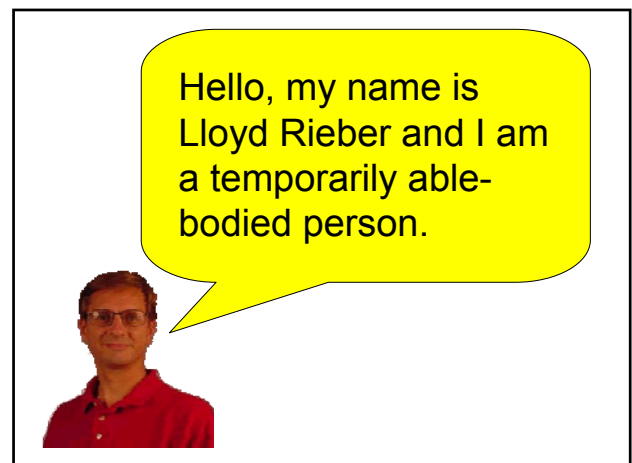

- It's the right thing to do.
- It's the ultimate in working "smarter, not harder."
- If practiced by all, it may help YOU in the end. (You have, or will have, needs that it addresses.)
- It's required in most federally funded projects (e.g. eLearning).

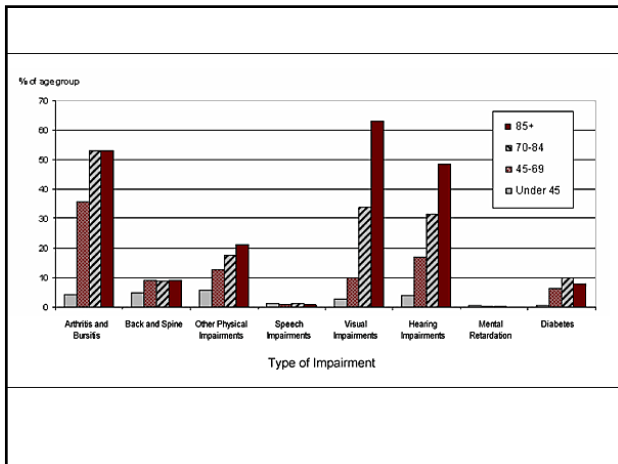

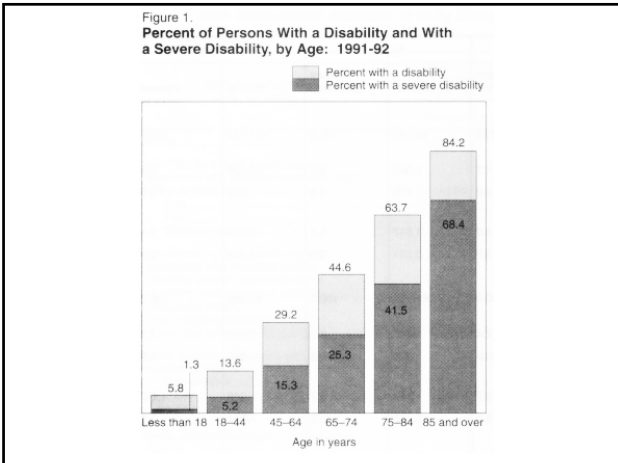

Aging statistics

- "One American in five has a disability, making people with disabilities the largest minority group and the only group that anyone can join at any time: at birth or through an accident, illness, or the aging process."

<http://www.disabilityisnatural.com/>

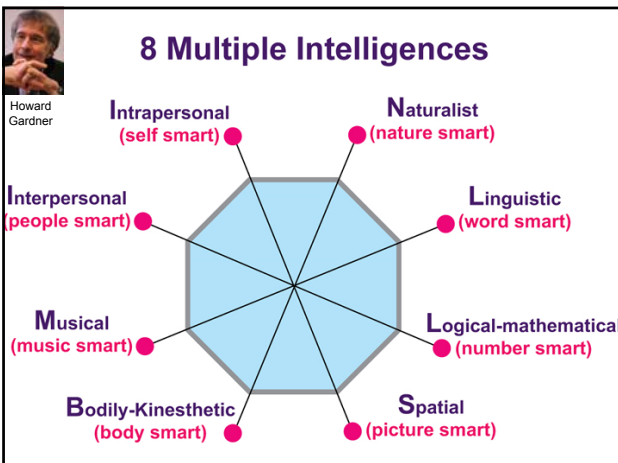

People First Language: Because Words Matter

- Avoid...
 - a deaf man
 - a blind person
 - a woman confined to a wheel chair
 - a girl suffering from multiple sclerosis
- Use instead...
 - a man who is deaf
 - a person who is blind
 - a woman using a wheel chair
 - a girl with multiple sclerosis

Actually, we all have our strengths and weaknesses...

What are you good at?
What are you not very good at?

Origins of Universal Design

Universal Design (UD)

- Coined by Dr. Ron Mace, Professor of Architecture of NCSU
- “Design of products and environments to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design” (Ron Mace, Center for Universal Design, North Carolina State University)

Mace, R.L., Hardie, G. J., Place, J. P. (1991). Accessible Environment: Toward Universal Design. In W.E. Preiser, J.C. Vischer, E.T. White (Eds.), *Design Intervention: Toward a More Humane Architecture*. (32 pages), New York: Van Nostrand Reinhold.

“...a sensible and economical way to reconcile the artistic integrity of a design with human needs in the environment. Solutions which result in no additional cost and no noticeable change in appearance can come about from knowledge about people, simple planning and careful selection of conventional products.”
(Mace, 1991)

Historical Perspective of UD

- 1950's – Disabled Veterans and others helped support the Barrier-Free movement
- 1960's - 1990's Civil Rights movement supported anti-discrimination laws
- In 1961, the American Standards Association published the first barrier-free standard entitled, *A 117.1-Making Buildings Accessible to and Usable by the Physically Handicapped*.
- In 1984, the Uniform Federal Accessibility Standard (UFAS) was created from the various State-adopted standards
- In 1990, the Americans with Disabilities Act was passed into law.
- From architecture to environmental initiatives, recreation, the arts, health care, and now to education.

Universal Design

- Not one size fits all – but alternatives.
- Designed from the beginning, not added on later.
- Increases access opportunities for everyone

Universal Design

- Ramps
- Curb Cuts
- Electric Doors
- Captions on Television
- Easy Grip Tools

UD Origin and Definitions

Drawbacks of Retrofitting

- Each retrofit solves only one local problem
- Retrofitting can be costly
- Many retrofits are UGLY!

UD Solutions

Principles of Universal Design

1. Equitable Use
2. Flexibility in Use
3. Simple and Intuitive to Use
4. Perceptible Information
5. Tolerance for Error
6. Low Physical Effort
7. Size and Space for Approach and Use

User Interface Design: A Quick Primer

Design Principle

Natural Mappings

Which is a better stove design?
Why?

A

B

Design Principle: Affordances

Different media/materials lend themselves to different uses

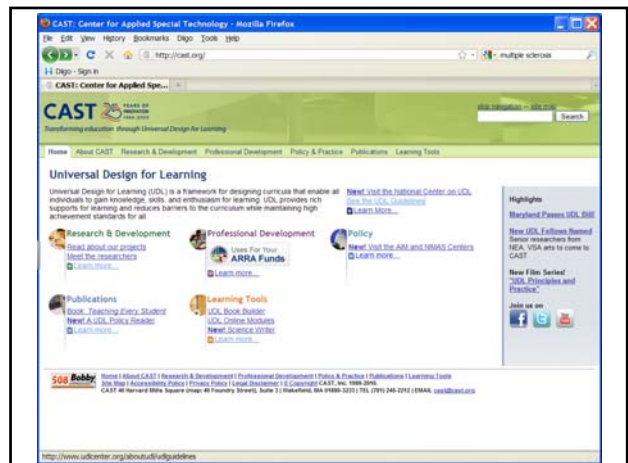

Design Principle

Give users a good conceptual model

During a weekend away an unusual cold front came through and your house is freezing. After switching to “heat”, which of the following will heat your home the fastest?

- Turn the thermostat to 72
- Turn the thermostat to 80
- Turn the thermostat to 90
- Turn the thermostat to 60, then 65, then 72
- Other?

Origins of Universal Design for Learning (UDL)

Origins of Universal Design for Learning (UDL)

CAST believes that “barriers to learning are not, in fact, inherent in the capacities of learners, but instead arise in learners’ interactions with inflexible educational goals, materials, methods, and assessments.”

Teaching Every Student in the Digital Age, p. vi

Teaching Every Student in the Digital Age: Universal Design for Learning

Barriers to *Learning* Access

How many of you can explain (not solve) the following?

$$2 + 3 = ?$$

Barriers to *Learning* Access

How many of you can explain (not solve) the following?

$$8/2 = ?$$

$$8/1 = ?$$

$$8/0 = ?$$

Barriers to *Learning* Access

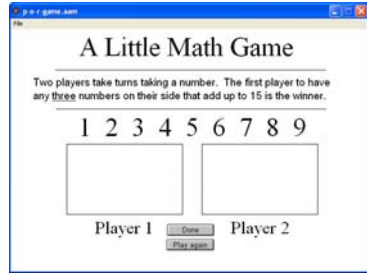

How many of you can explain the following?

$$\int dx = x$$

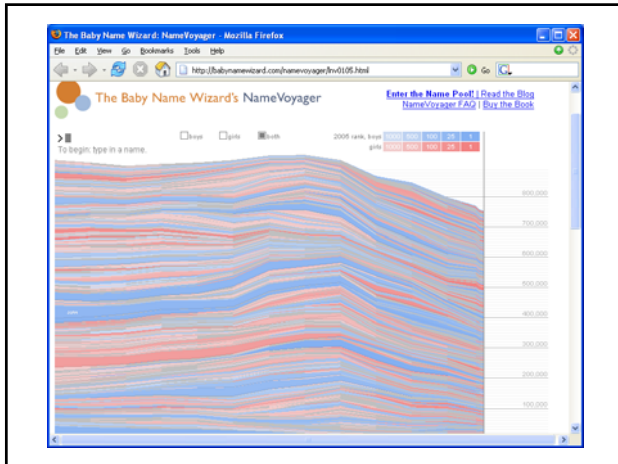

Barriers to Learning Access

- The Power and Consequences of Representation

UDL Guidelines

- I. Provide Multiple Means of Representation
 - Perception
 - Language and symbols
 - Comprehension
- II. Provide Multiple Means of Action and Expression
 - Physical action
 - Expressive skills and fluency
 - Executive function
- III. Provide Multiple Means of Engagement
 - Recruiting interest
 - Sustaining effort and persistence
 - Self-regulation

Origins of Universal Design for Learning (UDL)

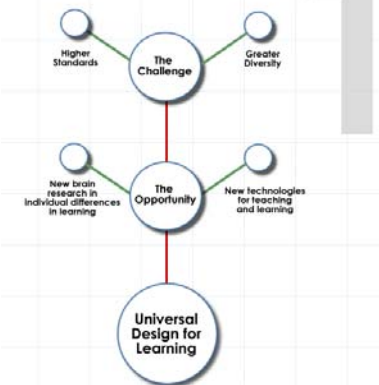

Definition:
UDL is an educational approach to teaching, learning, and assessment, drawing on new brain research and new media technologies to respond to individual learner differences.

UDL and the Learning Brain

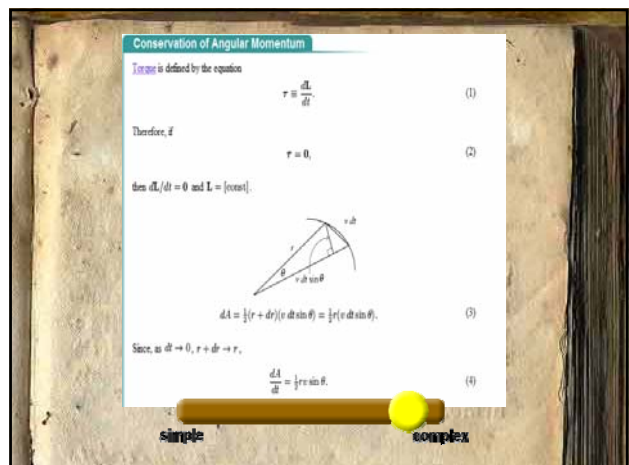

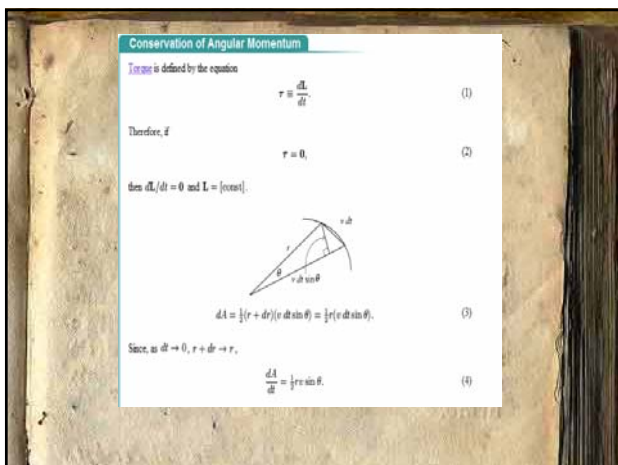

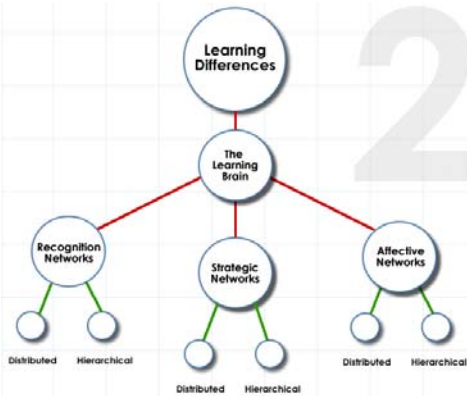

- Recognition network
- Strategic network
- Affective network

From Rose, David & Meyers, Ann (2003).

From Rose, David & Meyers, Ann (2003).

Kepler's second law

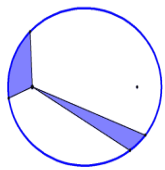

A line joining a planet and its star sweeps out equal areas during equal intervals of time.

This is also known as the law of equal areas. Suppose a planet takes 1 day to travel from points A to B. During this time, an imaginary line, from the Sun to the planet, will sweep out a roughly triangular area. This same amount of area will be swept every day.

As a planet travels in its elliptical orbit, its distance from the Sun will vary. As an equal area is swept during any period of time and since the distance from a planet to its orbiting star varies, one can conclude that in order for the area being swept to remain constant, a planet must vary in velocity. Planets move most rapidly when at perihelion and more slowly when at aphelion.

This law was developed, in part, from the observations of Brahe that indicated that the velocity of planets was not constant.

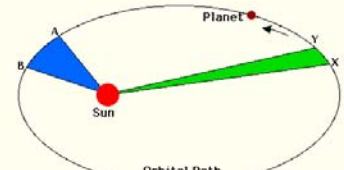

This law is the explicit expression of the angular momentum conservation law in given situation.

simple complex

Kepler's Second Law

A line joining a planet and the sun sweeps out equal areas in equal intervals of time.

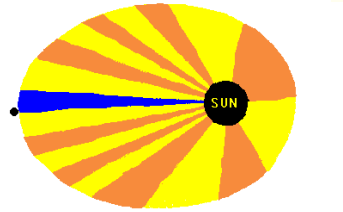

Here we have a picture of a planet going around its sun in an elliptical orbit.

- ### Learning in a Game: Affective Domain
- Motivation
 - Competition, random features
 - Intrinsic motivation: You create your own reasons for participating
 - Triggering challenge and curiosity
 - A feeling of control, but with an edge of uncertainty

- ### Learning in a Game: Cognitive Domain
- Meaningful, relevant context
 - Active participation in an “interactive story”
 - Organization, situation, goals, and feedback
 - Helps students to organize information, followed by putting knowledge to use
 - Narrative: The power of stories
 - Myths & Archetypes (Joseph Campbell)

- ### Game Design
- Optimizing challenge
 - What is your favorite sport?
 - Change one rule or the parameter of one game object.
 - What is the impact of this change on the game?

4.25 inches

Center court = 36 inches
Side posts = 42 inches
